

SMARTBRIDGE

Let's Bridge the Gap | SKILL WALLET - A SmartBridge Product

Date	29-09-2026
Team ID	SWTID-2026-7949
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: User Login & Role Assignment	Stage 2: Filtered Record Navigation & Querying	Stage 3: Record Creation, Modification & Deletion
Actions (What does the customer do?)	EEE User logs into ServiceNow instance; admin grants branch security role (bb1, bb2, bb3, bb4).	Navigates to Institution Details table (u_institution_details.list) to view departmental student records.	Clicks 'New' to add student data, edits descriptions for EEE records, or selects records to delete.
Touchpoint (What part of the service do they interact with?)	ServiceNow Login screen, User Administration profile (sys_user), and Roles Related List.	Application Navigator, Institution Details List View, and Field Filter condition bar.	Form View (u_institution_details), 'New' UI action, List Edit, and 'Actions on selected rows' dropdown.
Customer Thought (What is the customer thinking?)	"Will I only receive access permissions meant for my specific department without excess privileges?"	"I should strictly see records where Branch == 'EEE' and zero records from CSE or ECE branches."	"I should be able to create, update, or delete records securely based on my operational roles without error."
Customer Feeling (What is the customer feeling?)	Anticipation and concern regarding proper security governance and baseline access segregation.	Reassured and confident upon verifying that unauthorized cross-department records are completely hidden.	Empowered and productive having fine-grained CRUD control without accidental data loss or security leaks.
Process Ownership (Who is in the lead on this?)	ServiceNow System & Security Administrator (admin / security_admin).	Script-Controlled Read ACL Engine & Database Query Processor.	ServiceNow Security Admin & Departmental Coordinator (EEE User).
Opportunities (How can we improve this stage?)	Automate role provisioning using ServiceNow group membership rather than individual manual role assignments.	Implement 'before query' business rule to eliminate row count discrepancy notifications in list headers.	Provide contextual tooltips and custom banner messages explaining role-based edit/delete permissions.
