

SMARTBRIDGE

Let's Bridge the Gap | SKILL WALLET - A SmartBridge Product

Date	29-09-2026
Team ID	SWTID-2026-7949
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value

Project Demo Planning

A well-structured demo plan ensures that the team presents the project effectively, covering all key aspects in a clear and organized manner. This document outlines the plan for demonstrating the project, including the flow of the demo, key features to highlight, and responsibilities of each team member.

Project Demo Planning Agenda:

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem Statement	Present the problem of cross-department student data exposure in standard table views and the necessity of server-side row security.	3 mins	Team Member 1
2	Architecture & Schema Setup	Walk through custom table 'u_institution_details', field configurations, and custom security roles (bb1 to bb4).	3 mins	Team Member 2
3	Script-Controlled Read ACL Deep-Dive	Show elevated 'security_admin' role, explain Read ACL condition (Branch is EEE) and advanced JavaScript script logic (gs.hasRole).	4 mins	Team Member 1
4	Granular CRUD ACL Implementation	Demonstrate Create ACL (role bb2), Write ACL (role bb3), and Delete ACL (role bb4) configurations.	3 mins	Team Member 3
5	Multi-Persona Impersonation Live Test	Impersonate EEE User (strictly 2 EEE records visible + CRUD active), Impersonate Admin (all 6 records visible), Impersonate Non-role User (0 records).	5 mins	Team Member 2 & 3
6	Q&A and Architectural Wrap-up	Address evaluator inquiries regarding security best practices, performance overhead, scalability, and FERPA data compliance.	4 mins	All Team Members

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Highlight institutional compliance risks, PII data leakage, and why client-side UI policies fail to stop API tampering.
2	Solution Overview	Present the 3-tier ACL architecture: Role Requirement, Data Filter Condition (Branch is EEE), and ECMAScript evaluation.
3	Live Feature Demonstration	Execute live ServiceNow test via User Impersonation: compare EEE User (only EEE records, full CRUD) against Admin (global visibility).
4	Q&A Session	Explain performance benchmark results (<80ms script latency), update set artifact packaging, and future branch scalability.
